

## **SABRE Ground Target System AG457**

The **SABRE Ballistics** Ground Target System is designed to operate with the Base Station Type 450AG. High resolution scoring at the maximum rate of fire obtainable by modern aircraft / helicopter cannon (including Gattling guns) is accommodated. The target system is readily configured for up to seven targets, which are linked by buried cable. Communications with the Base Station is then by buried cable, or radio link if the optional Target Cluster Transceiver Unit is chosen.

The **SABRE** Ground Target System is durable and small to ensure high survivability on the range. It is also readily mounted / de-mounted and removed from the range by one man. This is necessary for some ranges where members of the public can gain access to it (to avoid pilferage etc). Built in test and a facility to buffer rounds scored on a target, which is not selected for engagement, are additional features of the SABRE Ground Target System.

**SMALL SIZE / VULNERABILITY**

**ONE MAN DE-MOUNTABLE**

**HIGH RESOLUTION SCORING**

**MULTI-TARGET CLUSTERS**

**BUILT IN TEST**
