

DC Tungsten Light System

The SABRE Ballistics DC Tungsten Light System (type 403-0901 and 403-1001) has been designed to overcome the limitations of light output and light source size (both length and width) of existing light units for Sky Screens. Optimum Sky Screen sensitivity with ease of installation is obtained.

The system comprises light units in IP65 enclosures for blast and weather resistance together with a wall mounted controller. Two light units may be operated from each controller. This is not suitable for older Milligan or PCC E/H type screens which require a fluorescent tube system.
