

Automatic Target Frame

The **SABRE Ballistics** Automatic Target Frame is a motorised paper target system and is available with armour plating or open framework.

The target paper, which is 1 metre wide x 300 metres long, can be remotely controlled by a cable and switch up to 200 metres from the target.

The target is also available in 0.5 metres square target area.

When used in conjunction with CCTV system, the SABRE Ballistics Automatic Target System enables a single operator to fire at up to 200 metres range and measure the group size for up to 300 target diagrams before it is necessary to change the target roll. Safety is enhanced by eliminating the requirement for a butt party.
